August 26, 1953

Professor J. Lederberg
University of Wisconsin
Department of Genetics
Madison, Wisconsin

Dear Professor Lederberg:

Because Dr. Thimann is in Europe until about the middle of September and he is anxious that most of the figures be cleared for use in his book, I am taking the liberty of replying, as best I can, to your inquiry as to precisely which figure he had in mind in his letter to you of July 23. From what I recall, this figure illustrates a scheme which you described at a set of meetings in Boston; the figure does not appear in the J. Bact. 64: 679-699. It was his thought that if you had published it subsequent to the meetings he would like to make full acknowledgment of its source, as is the usual custom. For your information, I am enclosing a rough sketch of the figure which he sent to the artist for final drawing. If this has been put in print by you we must obtain permission from the publisher and, indeed, if it has not been published, we would like to have your permission to use it in "The Life of Bacteria", attaching to it the acknowledgment of source.

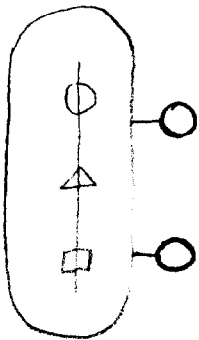

May I hear from you?

Sincerely yours,

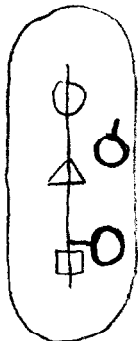

Emily B. Chamberlin
(Mrs. J. Lockwood Chamberlin)
Secretary to Professor Thimann

Dear Dr Lederberg,

Please excuse crudeness of this sketch, but as I wrote you, the figure was sent to Macmillan's artist for final drawing.

Emily Chamberlin
